Current Good Manufacturing Practices (cGMP) require companies to use up-to-date technologies to conform to the regulations. When operating under a quality system, manufacturers must develop and document control procedures to capture, create, protect, access, use, migrate, transform, archive, and destroy records, which provide evidence of operational and quality system activities. This will provide a quality system approach to fulfilling oversight and review of cGMP records. A quality management system (QMS) is a set of policies, processes and procedures required for planning and execution (production/development/service)...
